INTERNATIONAL SEARCH REPORT

International application No.

PCT/US04/18902

Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first she
This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reason
1. Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
2. Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)
This International Searching Authority found multiple inventions in this international application, as follows: Please See Continuation Sheet
1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims. 2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee. 3. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. No required additional search fees were timely paid by the applicant. Consequently, this international search report restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-13, 23-36 and 38 including SEQ ID NO:2 and 3
Remark on Protest The additional search fees were accompanied by the applicant's protest.
Form PCT/ISA/210 (continuation of first sheet(2)) (January 2004)

INTERNATIONAL SEARCH REPORT

International application No. PCT/US04/18902

BOX II. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claim(s) 1-13, 23-36 and 38, drawn to a method of modulating at least one photosensitive trait in a plant comprising altering the level of phytochrome and flowering time 1 (PFT1) in a plant, wherein the PFT1 protein has the amino acid sequence set forth in SEQ ID NO:3 encoded by SEQ ID NO:2; a transgenic plant having at least one modulated photosensitive trait as compared to a wild-type plant, comprising a nucleic acid encoding a PFT1 gene, recombinant nucleic acid sequence comprising SEQ ID NO:2 and method of producing a recombinant nucleic acid encoding a PFT1 protein.

Group II, claim(s) 14-22, drawn to a method of modulating a photosensitive trait in a plant cell or plant comprising an inhibitor of a PFT1 gene.

Group III, claim(s) 37, drawn to an isolated protein comprising SEQ ID NO:3.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: a method of modulating at least one photosensitive trait in a plant is taught in the prior. Tadege et al (2001, The Plant Journal 28(5):545-553) disclose isolated FLOWERING LOCUS C (FLC) related sequences from Brassica nuapus, wherein expression of each of the five sequences in Arabidopsis delayed flowering (decreased flowering-time) compared to wild-type plants. The office interprets flowering-time to be a photosensitive trait based on Applicants' definition of "photosensitive trait" (See page 6, paragraph 27).

In addition, the claims are not linked by a single technical feature because they are each drawn to products and processes not shared by the other. The method of modulating a photosensitive trait comprising overexpressing a gene in a plant of Group I, is not shared by the method of modulating a photosensitive trait comprising an inhibitor of a PFT1 gene of Group II, or which is not shared by the protein of Group III.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.
